

Red Bull

SEASON 2022

the kings of wet-dry racing

Perez Average Throttle Usage & overtakes without and with rain

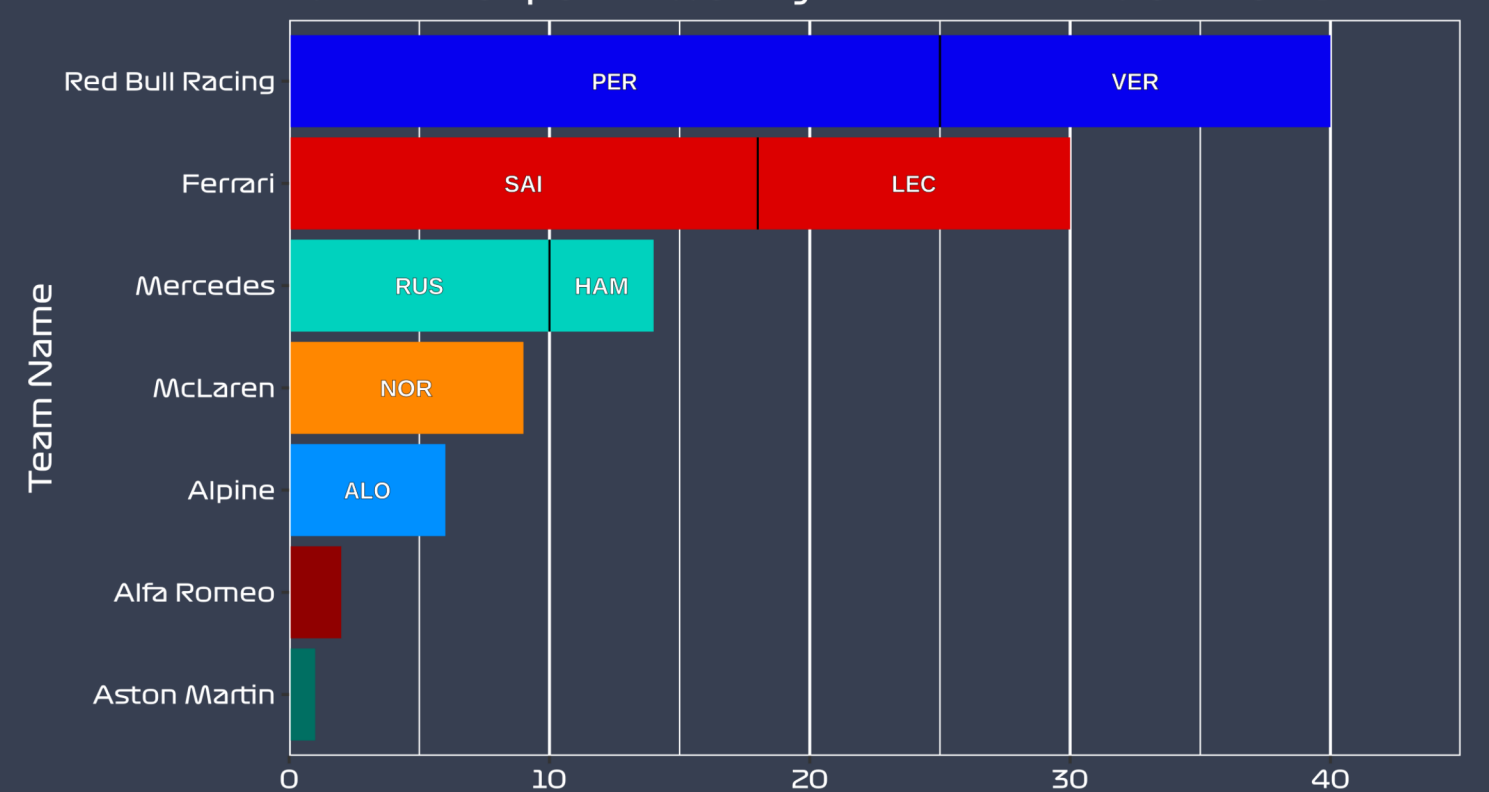

Everyone who is a Formula One fan has noticed that the 2022 is **Red Bull's season**. Massive domination in the mid season and **Max Verstappen** crowned **2022 Formula One World Champion** before the end of the season. But is it only luck or is Red Bull Team really superb?

Max Verstappen is the clear winner of the 2022 season being the first ever driver to receive the title before the last race. It wasn't however him, who took the lead in the **race in Monaco** on the 29th of May - it was **Sergio Perez** from the same team. Why would we single out this particular race?

The reason is **weather change**, it started raining during the race. This tested the drivers' abilities on both a wet and dry track. Statistics show that the weather might have been one of the reasons why Red Bull dominated in this particular race even more than in others. **Data from different races** proves that the Red Bull team excels at driving in weather conditions far from good. While rain was obviously not the only factor that made **Sergio Perez** win in Monaco, it probably helped him. He was the most precise to adjust his driving style to the conditions and ultimately took the **first place**.

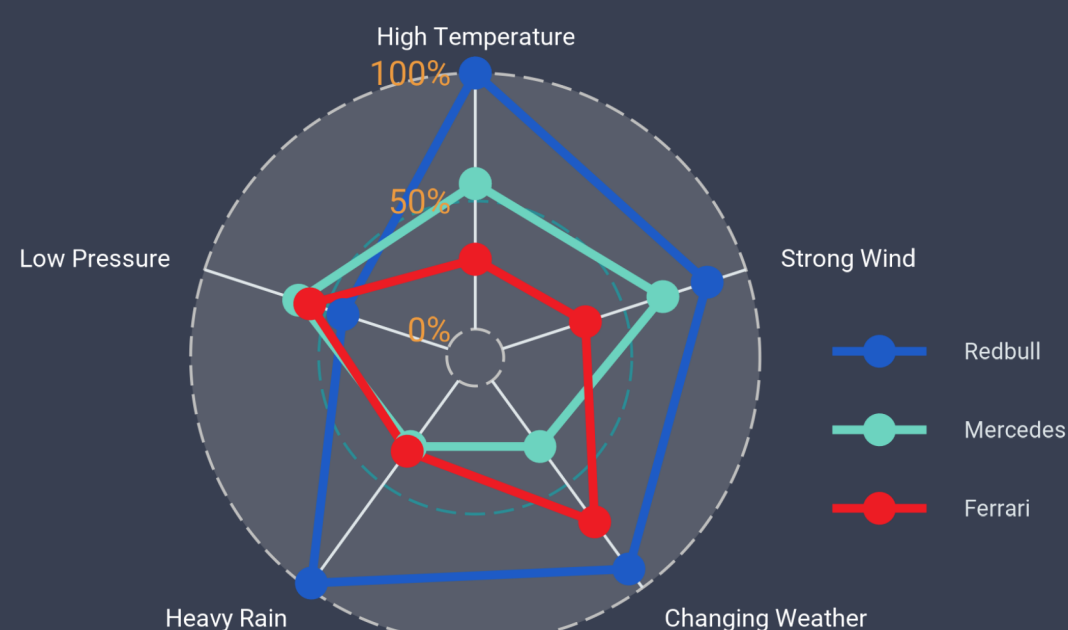

Number of points won by each team in Monaco 2022

*as of the 10th of November 2022

Percentage of points

gathered by teams in differently conditioned races

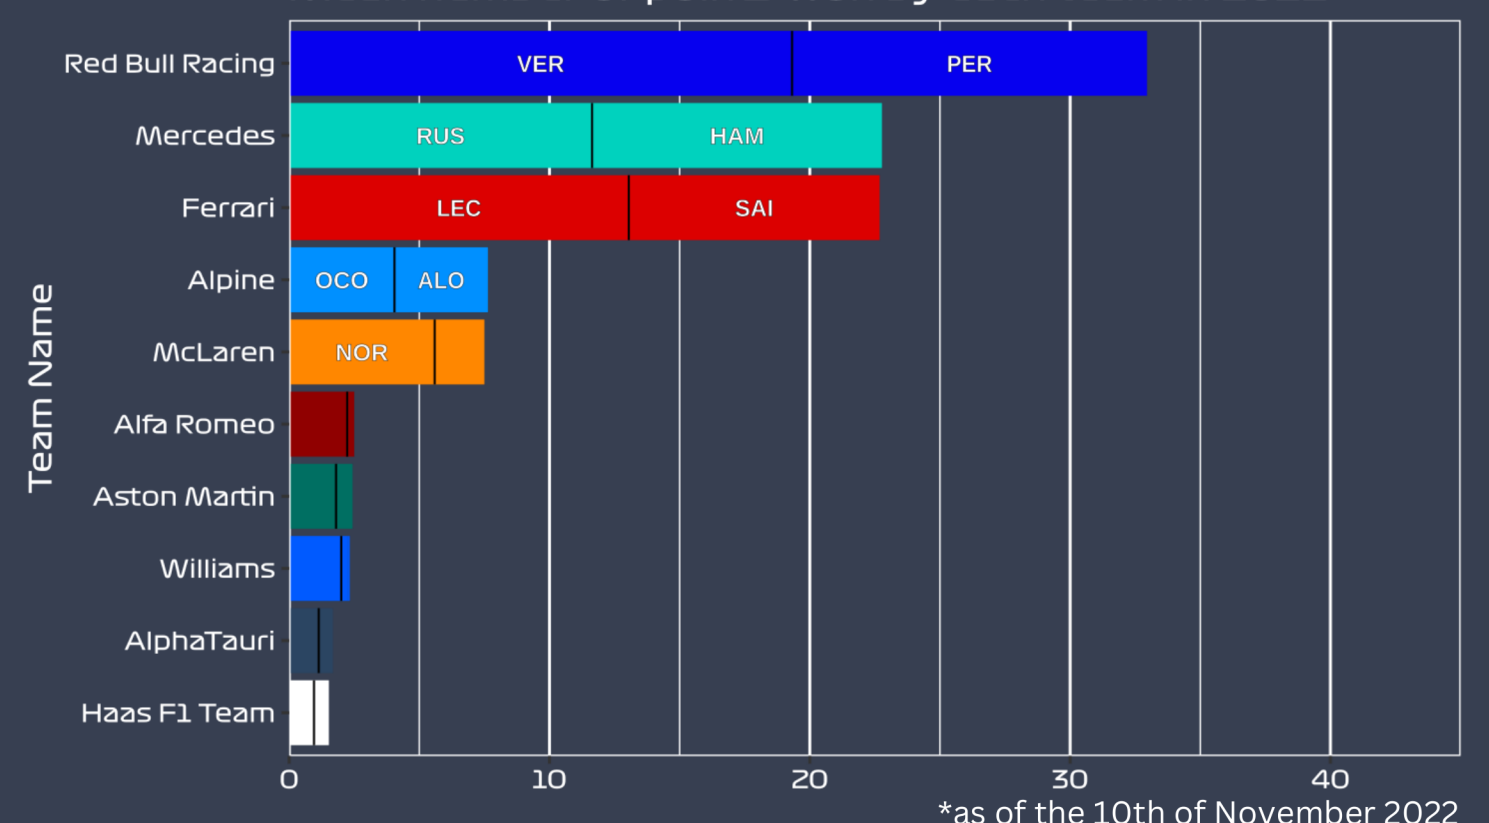

Strong Wind:
